* During the water test, there is no water flow around the watch. The ISO 2281 standard specifies a detailed testing procedure for each mark that defines not only pressures, but also test duration, water temperature, and other parameters. For example, to receive the "Water Resistant 30M" mark, the watch is first immersed 10 cm under water for 60 minutes, followed by 10 minutes under a pressure of 3 atm (approximately 73 PSI), after which no water must have leaked into the case. http://en.wikipedia.org/wiki/Atmosphere_%28unit%29
